CAS Customer Requirements Information

To leverage CAS authentication with Infobase Learning Cloud, you will need to have a dedicated CAS Identity Provider (IDP) and portal. (CAS downloads can be found at https://www.apereo.org/projects/cas/download-cas. CAS will need to be configured to support SAML 1.1.)

All of the below information is required before configuration can begin on the Infobase Learning Cloud side. Please type, do not hand write, your responses to each of the numbered items below.

1. Allow your CAS IDP enabled portal to be publicly available with CAS attribute sharing enabled.

   Check when complete ☐

2. Allow Infobase's CAS Service Provider (SP), listed below, access to your CAS IDP server.
   https://secure2.learningcloud.infobase.com/**

   Check when complete ☐

3. Provide Infobase with your CAS IDP enabled portal login URL below.

   _____

4. List your CAS validate URL below.

   _____

5. Provide Infobase the exact attribute name for each of the following required attributes (for example, you may be using the "department" attribute to provide Infobase with location information for each user, in which case you would type "department" under the location option below).

   - Username

     _____

   - Last Name

     _____

   - First Name

     _____

   - Email Address

     _____

- Location (must be a single valued attribute that identifies the primary location in which a user resides in your directory. Users cannot belong to more than one location in the Learning Cloud system. This is an optional attribute, but without it the system will not allow for filtering of reporting or user management.)

  _____

- Student/Staff Flag (must be a single valued attribute that distinguishes a student from a staff user in your directory. This is an optional attribute, but without it the system will not allow filtering of reporting or user management.)

  _____

6. Determine an attribute that is unique for each user across your institution; Infobase recommends email address. This attribute will be used to link accounts that may be coming from multiple sources (for example, CAS authentication as well as your Learning Management System) and thus needs to exist in each system that a user may be accessing Learning Cloud through. List the attribute you would like to use as this remote unique identifier below.

_____

7. Provide Infobase with temporary test accounts – one staff and one student – to be used during the configuration of your access to the Learning Cloud platform.

   Staff test account username / password _____/_____

   Student test account username / password _____/_____

8. Provide Infobase with a complete list of the values that will be passed through the Location attribute specified in question #5. **PLEASE NOTE:** If the user attributes contain a location that does not exist in Learning Cloud, the user will be put in the customer's default location. If needed, feel free to attach an additional sheet.
